

# Has stroke affected your thinking?

## Be part of... **Telerehabilitation for Attention and Memory in Stroke**

### What is the purpose of the study?

- Stroke often causes problems with attention and memory, which can change the way you live your life
- In this study, we are asking if daily mental exercises, done from home on your own computer, can improve thinking and paying attention

### How is the study being done?

- If you agree to be in this study, we will ask you to complete a computer activity from home once a day, 5 days a week for 6 weeks
- You will have a trainer that you can call any time if you have questions

### Can I participate?

For this study to be right for you, all of these must apply:

- ✓ You've noticed changes in your thinking or memory
- ✓ Your stroke was more than 3 months ago
- ✓ You don't have problems with your mood or other neurological diagnoses

We will go over these and other factors that are necessary for you to be in the study.

### How do I get more information?
